

System State

Vaulting deploys ratio vaults to slow down the erosion of inflation created by the liquidity pool formula, resulting in the creation of multiple copies of the user's crypto assets. By using Vaulting Liquidity Pools (VLP), the users securely lock up tokens in our smart escrow vaults (iPT), and by leveraging the power of natural market forces, the protocol generates sustainable and reliable yields over multiple crypto cycles.

WHY USE VAULTING LIQUIDITY POOLS (VLP)?

SLOWS DOWN THE EROSION OF TOKEN INFLATION BY 100% AND MORE

MULTIPLE COPIES OF YOUR CRYPTO ASSETS USING RATIOS & PHANTOM TOKENS (PSD & PST)

ALLOWS THE USER TO FULLY PARTICIPATE IN THE CRYPTO ECOSYSTEM (HODL / NFT / LP)

IF YOU GET RUGGED, IT'S OK. YOU HAVE ANOTHER COPY COMING OVER TIME

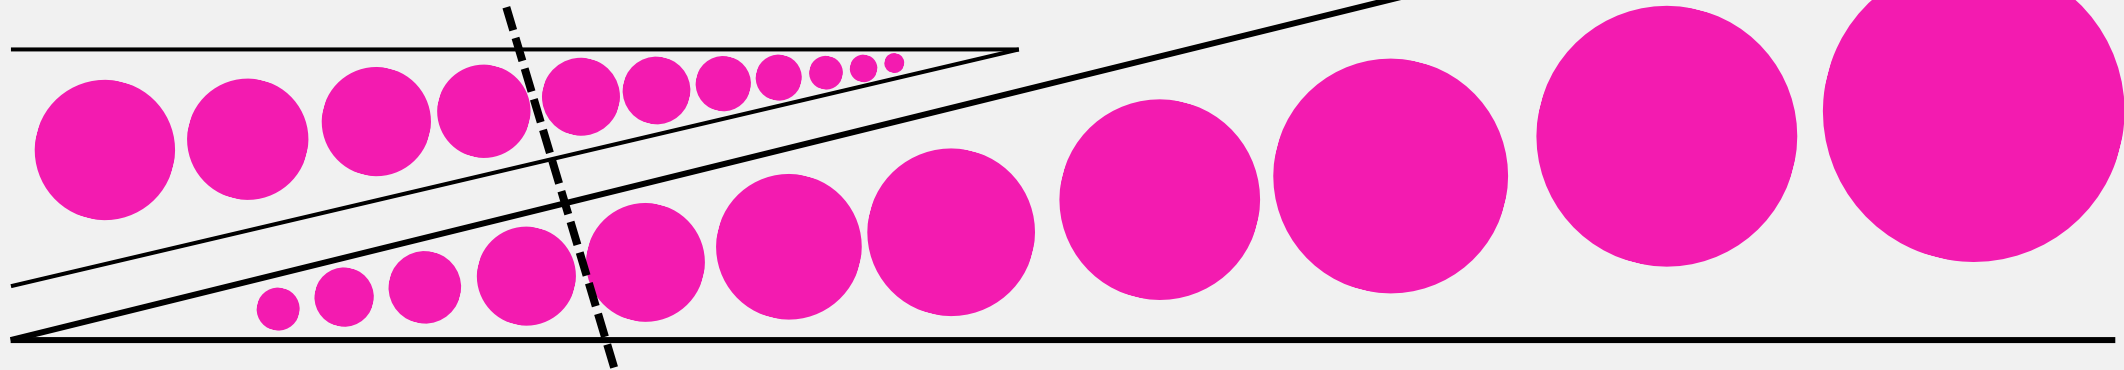

DECENTRALIZED, IMMUTABLE INFLATION BANK

TOKENS ARE LOCK AND CANNOT BE REMOVED TO MAINTAIN FIBONACCI CYCLES

WORKS WITH NATURAL MARKET FORCES SUCH AS PRICE AND MARKET CYCLES

Liquidity Pools (LP)

Users pool funds to create liquidity and destroy the token inflation in real-time caused by ratios

**Golden Ratio**

Point of perpetual gain
VLP outperforms LP

Vaulting Liquidity Pools (VLP)

Users pool funds using ratio vaults to create multiple copies of their crypto assets by delaying the erosion of token inflation caused by ratios

OPENING A VAULT

System State

38% RPT VAULTS

ENSURE THE USER GETS THEIR ORIGINAL TOKEN BACK

38% IPT VAULTS

SLOWS DOWN INFLATION EROSION OVER MULTIPLE CYCLES

7% PARITY FEE

PARITY SHARE TOKENS (PST) - USERS POOL SHARE

7% PROTOCOL FEE

ORACLE/API/NODES/DEVELOPMENT COST

10% AUTO-VAULTS

ENSURE AUTONOMY OF THE PROTOCOL OVER TIME.

EXAMPLES OF OPEN VAULTS
